

FISH TUMOR PUBLIC INFORMATION SESSION

Please join us for a discussion on the findings and interpretations of the 2012-2014 Fish Tumor Study.

The study compares contaminant impacts of fish caught within the Massena/Akwesasne Area of Concern (AOC) to those caught at reference sites outside of the AOC. This consisted of chemical analyses, histologic analyses of liver tissues, and the identification of external anomalies. Following a brief presentation on the results of the study, community members are invited to ask questions or voice concerns. Information packets will be available for those unable to attend the presentation.

September 28, 2015

**Hawkins Point
Visitor Center
Massena, NY
3:00 PM- 5:00 PM**

**Akwesasne Senior
Center
Akwesasne
6:00 PM- 8:00 PM**
